The first version of the software offers basic functionality, by offering users with the ability to recover saved website login details. However, this 1st version of the tool is still in its early stages, as it features a basic and clunky UI and some issues in the performance, which led to the decision to develop a much better and visually appealing interface. Pulse creates a unique, beautiful portfolio site for your portfolio, or resume, or business card. It's all on a beautiful, responsive grid, so it's accessible on any device. Get the best possible results when backing up your data with OPC's Data Caching. Introduction Whether you're upgrading to a new laptop or you're just going to the store to buy another computer, having an extra copy of your data is highly recommended. If you're like most of us, you've got a lot of data on your computer. And with the growth of the Internet, that number only seems to be growing. If you haven't backed up your data in a while, we'll show you how to get the best possible results when backing up your data with OPC's Data Caching. How does Data Caching work? Data Caching works by backing up an entire folder or drive to a Web server and then applying a secure hash algorithm to the data, and storing it in a database. Any time the data is retrieved, the database retrieves the latest version of the data, and then the client application uses the hash to check if any changes were made to the file. This allows a client application to check if the data was modified since the last time it was retrieved. The data can then be saved in a local cache, so it's always up to date. When is it needed? When you need to backup your data, it's often easiest to back it up to a Web server, so it can be accessed from anywhere on the Internet. A Web server is much better than a regular file server. Because Web servers are constantly updated with new data, they're a much better choice than a local file server. For this reason, data backups are highly recommended. There are three main types of caches: Static Caches Static caches have no moving parts. These caches are almost always found in the cloud and are generally set to expire after a certain amount of time, or after the data has not been accessed in a certain amount of time. These caches are generally better
