There's a learning curve, but I can turn it off and play, then come back to it later, review my edits, discard or accept them, and see my edits as a group. It's a multi-pass workflow, so I avoid the saving thing unless it's absolutely necessary. Or maybe the thought of showing someone else's work is enough of a deterrent. The software makes it easy to share screen shots directly from the app, and you can create links to any image in the app directly from within the app. While editing, you can grab the right-hand corner of the brush and use your pointer or finger to resize it. Refine edges, change blend modes, and adapt settings like brush diameter, roundness, and hardness. If you press the space bar, you'll see an Info panel at top or bottom with a box listing which tools and buttons do which function. The little circular gears on the right side of the Info window, and other little gears dotting the image, turn indicators while they're selected. Turns out Adobe is equally comfortable with effects such as the big massive color wheel or a fly-out filter list, but this set of patterns reminds me of the "smart" filters found on the Canon 5DmkII. The color picker in the Info panel is used to change the brightness, contrast, and saturation of the image, and to lighten or darken the shadows. It also enables you to change the color of the Edge-Aware repair tool, so that edges transition from the foreground color to the background color. In fact, any of the different tools work this way -- if you can select colors with the picker, they'll work with any tool, including the brush.
